PROFESSIONAL SUMMARY

Versatile AI & Data Engineer holding a dual Master’s in Data Science and Intelligent Computer Systems. Specializes in building robust Python pipelines, agentic workflows, and automated evaluation systems for AI-driven data extraction. Experienced across the full ML lifecycle, from multi-source data processing and model training to LLM benchmarking and interactive app deployment. Seeking a full-time role; available immediately

PROFESSIONAL EXPERIENCE

AI Quality, Apiday, Paris, France

December 2025 – September 2026

- Helped build an agentic pipeline validating AI-extracted ESG data against source documents, cutting manual review time
- Contributed to an AI chat agent letting users query their platform data in natural language
- Automated and monitored both workflows on Google Cloud Platform (GCP), refining prompts and agent logic from production failures
- Gained hands-on knowledge of ESG data and sustainable investment

Internship, Eden AI, Lyon, France

July 2025 – September 2025 (2 months)

- Learned how different LLM providers work and integrated 10+ of them behind Eden AI's unified endpoint, writing prompts that held up across providers
- Built an LLM leaderboard to benchmark models, learning evaluation methodologies and tools (Ragas, Opik) along the way

Internship, Laboratoire Lyon 1, Lyon, France

October 2024 – February 2025 (4 months)

- Evaluated the Y Social platform for simulating social dynamics and analyzed simulation results using data mining techniques
- Contributed findings to lab research on LLM-driven social simulations, using LLMs, Y Social, SQLite3, NetworkX, and Matplotlib

Internship, IA & SD, USTHB

December 2023 – June 2024 (6 months) | Wildfire Spread Prediction

- Preprocessed the SeasFire satellite dataset (xarray) into model-ready tensors for wildfire propagation forecasting
- Built and evaluated TensorFlow models predicting wildfire spread, comparing architectures on prediction accuracy

TECHNICAL SKILLS

Programming & Data: Python, SQL, Java, C/C++, Pandas, NumPy, xarray

AI & ML: LLM Evaluation, Prompt Engineering, Agentic AI, Machine Learning, Deep Learning, Data Mining

Frameworks & Tools: LangChain, OpenAI API, Eden AI API, Ragas, Opik, TensorFlow, Scikit-learn, NLTK, Transformers, Matplotlib

Databases & BI: Oracle, MySQL, MongoDB, SQLite3, Power BI, Tableau

Cloud & DevOps: Google Cloud Platform (GCP), Git, GitLab CI/CD, Jest

Web Development: JavaScript, Next.js, HTML, CSS, Leaflet

Design Tools: Figma, Adobe Illustrator, Adobe Premiere Pro

Languages: French (native), English (advanced, TOEIC), Kabyle (native)

PROJECTS

EcoTrajet: Carbon Footprint Web Application | Université Lyon 1, 2025

- Built a web application comparing the carbon footprint of transport modes, with route calculation and an interactive map, using Next.js, Leaflet, OSRM, Nominatim, Jest, and GitLab CI/CD

Information Retrieval System (SRI) | USTHB, 2024

- Built an information retrieval system implementing Boolean, vector-space, probabilistic, and neural models, and evaluated retrieval performance on the LISA collection using NLTK and Transformers

Data Mining System | USTHB, 2023

- Built a data mining application covering data preprocessing, supervised and unsupervised learning, and model evaluation, using Scikit-learn, Pandas, NumPy, and Matplotlib

EDUCATION

M.Sc. Data Science & Business Intelligence, EDC Paris, Paris, France

2025 – 2026

Master 1, Computer Science, Université Claude Bernard Lyon 1, Lyon, France

2024 – 2025

M.Sc. Intelligent Computer Systems, USTHB

2022 – 2024 | Graduated with High Honors

VOLUNTEER EXPERIENCE

- ETIC Student Club, ESI (2019 – 2024):** Led the video production team; member of the external relations and event logistics teams
- Micro Club, USTHB (since 2022):** Contributed to IT, communication, and UX/UI design for club projects

INTERESTS

Hackathons, video editing and production, graphic design, running
